

Greenhouse gas emissions caused by idling vehicular traffic and city policy surrounding such.

What climate change impacts are you facing or most concerned about?

Most concerned about the death and suffering caused to creatures and poor humans. The biggest personal impact to me is that walking and cycling is incredibly dangerous

**Fire,
water
scarcity**

Buildings not designed to protect us from the various weather changes (stronger storms, higher temperatures)

**worse
storms**

Lack of food changes in growing seasons and resources

Adopt city policy that discourages idling vehicular traffic.

neighborhood organizing

How do you think we should prepare for these climate change impacts?

Question our assumptions of what we believe we need in order to live comfortably

Fuel load management, managing for mature and midlife trees. Water conservation, Managing the Laguna for retention, water capture, replanting for water frugal plants

Water conservation, management of Laguna, water harvesting.

**Electrification,
Watt frugal
campaign**

**more vehicle
electrification
& home
retrofits**

**Police give citations
for traffic code
violations. People
stop using heavy
machinery for
personal transport**

What do you think the City and/or residents should do to reduce our emissions?

Find ways to motivate private enterprise to provide new services are a affordable price (retrofits for building, EV charging, materials from sustainable sources

Demonstrate how we can change our living patterns and provide in ordinance the ability to do things differently than we have in the past.

Have a central resource that tells us about all the rebates available

Develop a program that helps residents learn how to make their homes all electric like the bayren water program

How can we make sure that all Sebastopol community members are included in and benefit from these efforts?

Offer extensive help and upfront financing as in the water program

obligations for landlords and vacation rental management

more outreach to homeless community

What is your vision for a carbon neutral, resilient Sebastopol?

Or, what do you want Sebastopol to look like 10 years from now?
