

**Fire**

**Smoke  
from  
fires**

Missing  
important  
outdoor  
events due to  
air quality (esp  
with COVID)

Threat of  
evacuations

**Excess  
heat**

I'm concerned about  
water conservation,  
especially with  
Sebastopol being it's  
own watershed.

**Drought**

What climate change impacts are you  
facing or most concerned about?

**Warming  
oceans/effects  
on marine life**

**Flooding/rising sea  
levels**

**Emergency  
preparedness  
team: CERT**

**Interagency  
coordination prior to  
disaster events:  
government and  
non-government**

**Communication  
options, including  
community  
education re: use of  
text messaging as  
primary form during  
power outages and  
disasters**

**Resilience centers:  
shelter, electricity  
access, internet to  
connect to family  
out of area**

How do you think we should prepare  
for these climate change impacts?

**Install an individual  
water meter for  
each residential unit  
in Sebastopol.**

**Community  
options for  
temperature  
extremes**

**Community education: using word climate change (comprehensive)**

**Assistance and education for retrofitting**

**Retrofitting buildings, esp for efficiency: caulking, insulation**

**Food waste management: increasing composting (home cooking and eating out)**

**eating less meat**

**test kitchen with high quality induction stove top so that people can try it.**

What do you think the City and/or residents should do to reduce our emissions?

**Bicycle sharing, including e-bikes and/or scooters**

**Car-sharing options**

**More access to EVs**

**Support  
carbon tax (at  
source) &  
dividend**

How can we make sure that all Sebastopol  
community members are included in and benefit  
from these efforts?

**Evaluating all the  
homes in town,  
connecting to  
programs/providing  
loans for upgrades**

What is your vision for a carbon neutral, resilient Sebastopol?

Or, what do you want Sebastopol to look like 10 years from now?
