

BODEGA & ROBINSON TRAFFIC ANALYSIS UPDATE MEMO

DATE: November 11, 2022

TO: Lauren Alexander | Pacific West Communities, Inc.

FROM: Christian Thompson | DKS Associates

SUBJECT: Bodega & Robinson Traffic Analysis Update Memo

The purpose of this memo is to present additional analysis per comments from the City of Sebastopol, CA (the City) in support of the previously completed Transportation Impact Analysis (TIA) for the Woodmark Apartments at 7760 & 7716 Bodega Avenue project.¹ This memo documents an adjustment of the trip distribution per City comments to provide updated traffic analysis results, additional queuing analysis, and an updated signal warrant analysis. An excerpt of the City's comments can be found in Appendix D.

The Woodmark Apartments project consists of 84 apartment units with an approximately 2,470 square foot community area. The site plan is shown in Figure 1.

¹ Draft Transportation Impact Analysis Report, Woodmark Apartments at 7760 & 7716 Bodega Avenue, TJKM, October 2, 2020.

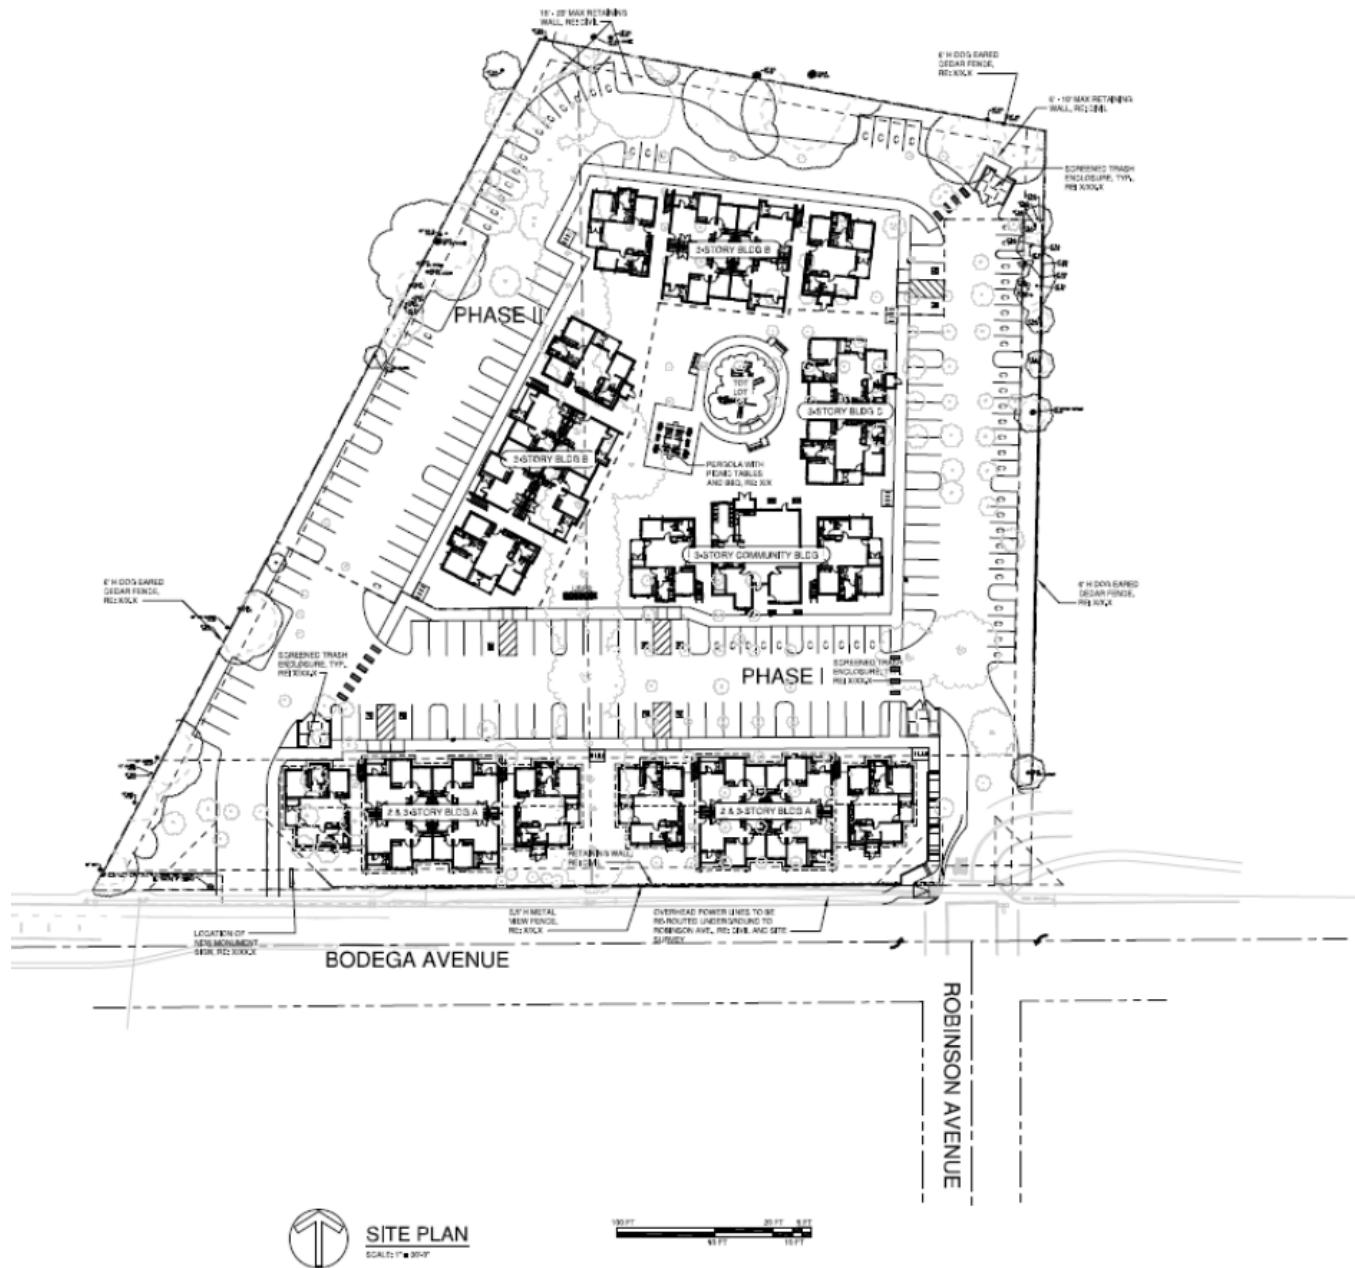

FIGURE 1: WOODMARK APARTMENTS SITE PLAN

UPDATED TRAFFIC ANALYSIS

Per City comment 52, the project's western access on the north side of Bodega Avenue will be restricted to right-in right-out only. All outbound traffic toward the east must be routed through the eastern driveway near Robinson Road and the existing Bear Meadows community. This change was made by editing the trip distribution paths for the previous study's Scenario 2. Rather than exiting

the western driveway and making a U-turn, outbound trips will use the eastern driveway and make a southbound left turn onto Bodega Avenue at Robinson Road.

These changes were applied to an updated Synchro model that matches the previous study, and the HCM 2010 results for both intersection analysis and queuing are shown below in Table 1 and Table 2, respectively. Since the only changes occur at the intersection of Bodega Avenue & Robinson Road and the adjacent eastern site driveway, this updated analysis only shows results for these intersections. Full Synchro reports are shown in Appendix B for the updated Existing + Project and Cumulative + Project scenarios.

Results for other study intersections remain the same as were shown in the previously completed TIA, and the previous TIA's results for Bodega Avenue & Robinson Road are included in Appendix A for the Existing and Cumulative scenarios.

TABLE 1: UPDATED HCM 2010 TRAFFIC ANALYSIS RESULTS

#	INTERSECTION	PEAK HOUR (1)	EXISTING		EXISTING + PROJECT		CUMULATIVE		CUMULATIVE + PROJECT	
			Avg Delay (2)	LOS (3)	Avg Delay (2)	LOS (3)	Avg Delay (2)	LOS (3)	Avg Delay (2)	LOS (3)
3	Bodega Avenue & Robinson Road	AM	23.6	C	24.1	C	29.0	D	29.5	D
		PM	24.3	C	25.5	D	29.4	D	30.8	D
8	Bodega Avenue & Eastern Driveway/Bear Meadows Driveway	AM			8.4	A			8.4	A
		PM			8.4	A			8.4	A

Notes:

1 AM = morning peak hour, PM = evening peak hour.

2 Total control delay for the worst movement is presented for side-street stop-controlled intersections.

3 LOS = Level of Service

As shown, the intersections operate at LOS D or better. Queuing results are shown below, which were reported with HCM 2010 to match the previously completed TIA methodology. HCM 2010 queuing is reported in vehicle units, so for the purposes of this analysis 1 vehicle is assumed to be 25 feet of queue length and is reported as such in the table below.

TABLE 2: UPDATED HCM 2010 QUEUING RESULTS

#	INTERSECTION	MOVEMENT	STORAGE (FEET)	95TH PERCENTILE QUEUE LENGTH (FEET)			
				EXISTING	EXISTING + PROJECT	CUMULATIVE	CUMULATIVE + PROJECT
3	Bodega Avenue & Robinson Road	NBLTR	200	30	30	35	45
		EBL	80	0	0	0	0
		WBL	60	0	0	0	0
		SBLTR	50	0	15	0	13
		NBLTR	200	23	25	25	28
		EBL	80	0	0	0	0
8	Bodega Avenue & Eastern Driveway/Bear Meadows Driveway	WBL	60	0	0	0	0
		SBLTR	50	0	8	3	10
		NBLTR	50		0		0
		EBLR	50		3		3
		NBLTR	50		0		0
		EBLR	50		0		0

As shown, the intersections remain at LOS D or better even under the Cumulative + Project scenario. The queuing results also show that the 95th percentile queues are within the storage limits for all movements in all scenarios. This analysis shows that delays to the existing Bear Meadows community will not be significant.

UPDATED SIGNAL WARRANT

Using the same set of corrected volumes for the Existing + Project and the Cumulative + Project scenarios as shown above, the signal warrant analysis was updated to account for the right-in right-out western access and rerouted trips. The results show that a signal is not warranted per the California MUTCD Warrant 3 (peak hour warrant). As shown in Appendix C, the 70% factor warrant was utilized because the City of Sebastopol population is less than 10,000 people.²

The AM peak hour for the Cumulative + Project scenario comes near to meeting the minimum warrant threshold. The side street volume does not meet the minimum threshold for considering a signal. Since the higher side street volume is the south leg of Robinson Road, traffic approach from the south would have to increase in order to meet the minimum warrant threshold.

PEDESTRIAN CROSSING TREATMENT ANALYSIS

This section discusses the potential improvements for the intersection of Bodega Avenue & Robinson Road, particularly in regard to the pedestrian crossing across Bodega Avenue. The intersection currently has marked crosswalks across both legs of Bodega Avenue, which is 3 lanes wide at the intersection. Parking is not allowed along any of the 4 legs at this intersection, and site distance appears to be generally adequate considering the 35-mph posted speed limit.

Given the relatively low amount of side street volume, a traffic signal is not recommended as a near-term improvement. To the west at Bodega Avenue & Nelson Way there exists a high intensity activated crosswalk (HAWK) signal, but a HAWK signal is not typically appropriate for shorter crosswalks such as the one across Bodega Avenue at Robinson Road (at Nelson Way, the crossing distance is approximately 65 feet while at Robinson Road the distance is approximately 45 feet).

For this intersection, a Rectangular Rapid Flashing Beacon (RRFB) crossing treatment is likely the most appropriate improvement. As already mentioned in the City's comments, markings, signage, and ADA-compliant ramps are also needed to improve the safety of pedestrians crossing at this intersection.

² <https://ci.sebastopol.ca.us/Our-Community/Current-Snapshot>

CONCLUSIONS

The following points can be concluded by the analysis presented in this memo:

- The updated traffic and queuing analysis shows the impact to the neighboring Bear Meadows development will not be significant. No changes to the eastern access configuration are needed.
- The updated signal warrant analysis shows that the intersection of Bodega Avenue & Robinson Road does not meet the minimum volume warrant thresholds for a traffic signal.
- To improve pedestrian safety crossing Bodega Avenue at Robinson Road, RRFB crossings are recommended as the most appropriate intersection improvement.

APPENDIX C: UPDATED SIGNAL WARRANT ANALYSIS (CAMUTCD WARRANT 3)

Existing + Project (Revised Volumes)

CAMUTCD (Rev 6, March 30, 2021)

Figure 4C-4. Warrant 3, Peak Hour (70% Factor)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 40 MPH ON MAJOR STREET)

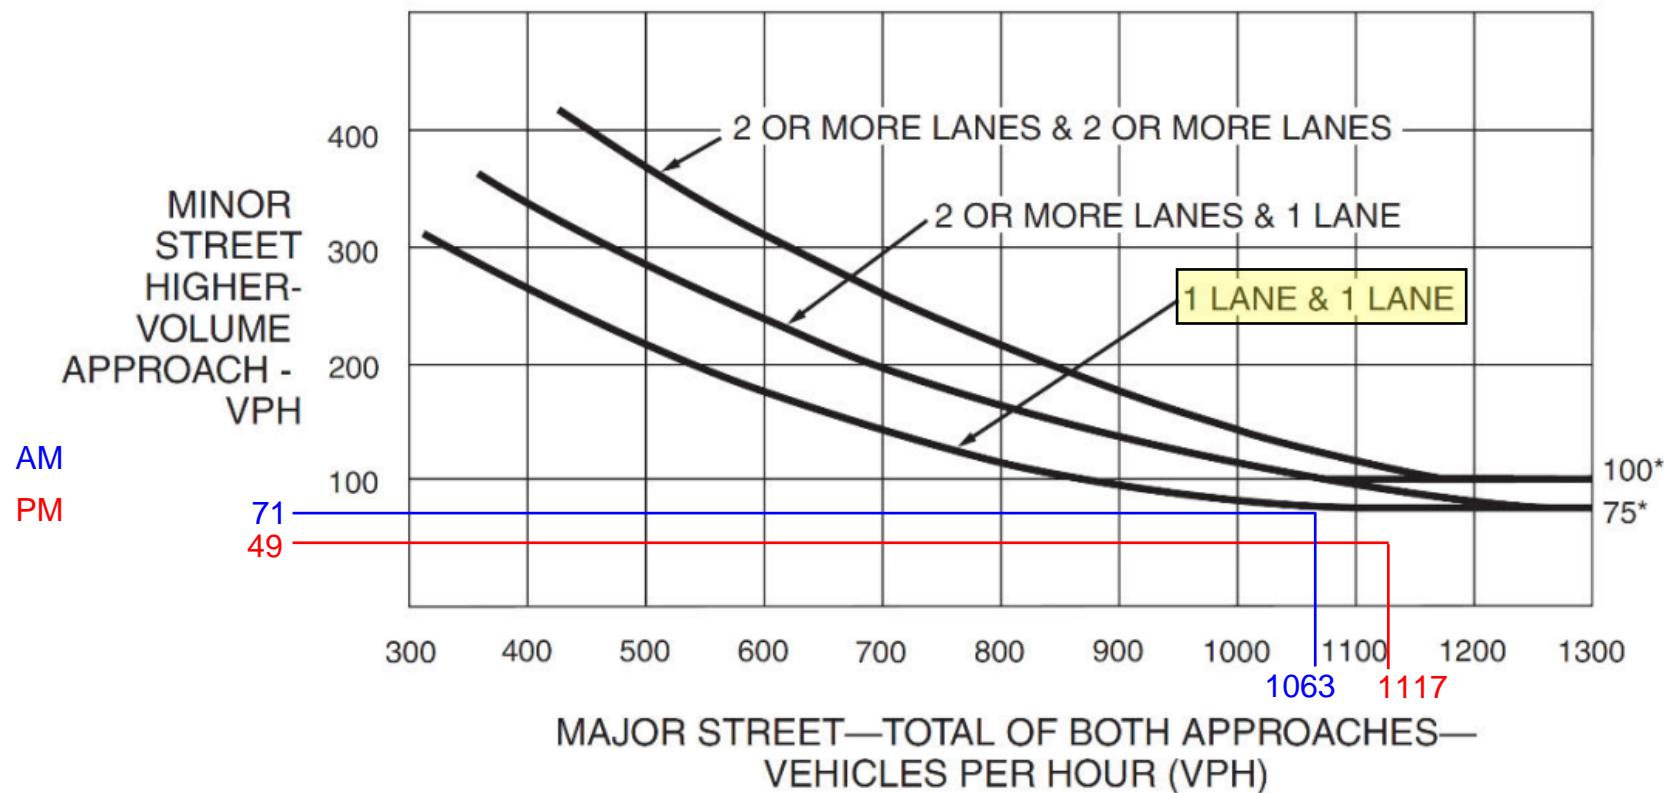

*Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

Cumulative + Project (Revised Volumes)

CAMUTCD (Rev 6, March 30, 2021)

Figure 4C-4. Warrant 3, Peak Hour (70% Factor)

(COMMUNITY LESS THAN 10,000 POPULATION OR ABOVE 40 MPH ON MAJOR STREET)

*Note: 100 vph applies as the lower threshold volume for a minor-street approach with two or more lanes and 75 vph applies as the lower threshold volume for a minor-street approach with one lane.

APPENDIX D: CITY COMMENTS (EXCERPT)

52. The project as proposed by the applicant will have two access points, one on the east side aligned with Robinson Road and a western access which would be midblock between Robinson Road and Nelson Way-Gold Ridge Farm. The western access will need to be restricted to right-turn movements in and out, with no left-turn access due to proximity to the Nelson/Bodega intersection, as well as an existing concrete median preventing left turns at this location. Prior to the approval of the first building permit, the applicant shall provide an updated traffic analysis to address the following:

- a. Due to the concerns of traffic safety at the intersection of Bodega Avenue/Robinson Road which serves the project's main access, the intersection needs be evaluated to determine if a traffic signal were warranted with the addition of project. It should be noted that the estimated traffic volumes for the project in the previous traffic study were incorrect (as previously noted). These traffic volumes, which should include all of the project's left-turn in and left-turn out traffic, shall be updated. These volumes shall then be used to calculate traffic signal warrants for the Robinson Road intersection.
- b. The existing townhome development to the east (Bear Meadows) gains access directly to the Bodega Avenue/Robinson Road intersection. The current design plans for the project access will likely cause delay to this existing traffic. This issue shall be examined further using a queuing analysis to determine if the design of the access needs to change so as not to cause significant delay to the existing townhome traffic. This analysis shall be submitted to the City for review and approval, and any potential additional conditions. These conditions/modifications shall be incorporated into the building permit submittal.
- c. If project construction is phased, both access points will be required to be completed in the first phase of construction prior to occupancy. The project shall provide an interim plan to provide the access needed to serve truck traffic during construction as part of any Construction Management Plan.

53. Developer shall be responsible for the installation of pedestrian crossing improvements at the Bodega Avenue/Robinson Road intersection on the westerly side of Bodega Avenue. Said crossing improvement shall consist of Bodega Avenue crosswalk markings and signage, ADA curb ramps, and new pedestrian-activated flashing Rapid Rectangular Flashing Beacon (RRFB) or other pedestrian safety requirements as needed based on the required Traffic Analysis.
