Subject: DANGER: Please DENY Crown Castle/T-Mobile's Application Now...
Date: Saturday, September 12, 2026 2:31:37 PM

NO to more cell antennas on the cell tower. END the lease with Crown Castle please!

G5, EMFs, all very destructive. Myself, and some other senior citizens are having trouble with these. I sometimes "hear" the sonic sound that is hard to disban from hearing. It's worse than tinnitus.

EMFs low frequency does not damage the human DNA.

However high frequence EMFs do damage the human DNA and exude powerful sources like x ray and ultraviote rays carrying energy that can break the body's chemical bonds and do damage cells!!!

It is not safe. The majority of the population does not know this. TO SPELL IT OUT:
RADIATION EXPOSURE!!!

PLEASE DO YOUR RESEARCH. Please STOP the proposed cell tower expansion at the Sebastopol City Hall and end the lease with crown castle!

I knew a friend who lived on the hill over in that area and she had to move as her body was deteriorating. She ended up with heart trauma and almost died and of course had to move away from the current satellites.

They're requesting more land for ground equipment making way for more of the harmful high EMFs. T-Mobile is actually in fear because they may go bankrupt and in order to save their company, they are reducing their monthly costs and climbing onboard to anything that they can hang onto! It's almost like when someone is drowning and they take down others with them.

I have a theory and you will think this crazy, but the USA has finally admitted that there's been contact with Extra-terrestrials. Those ET's that return to earth have been transfigured by this very thing: High EMFs of radioactivity and they are trying to change back to their human DNA. This may be a theory, but would you take this chance?

I can't apologize for being concerned about our human race.

Sincerely, and most apprehensively,
Cynthia Blackstone
